Logistics

Changes to document statistics

In response to customer expectations, the following two columns have been added in the selected document statistics window:

- **Quantity** – presents the value from the *Quantity* field available in document line item together with the unit of measure used in the document
- **Quantity in Basic UOM** – presents the value from the *Quantity in Basic Unit* field available in document line item together with the unit of measure assigned to an item

Net Weight: 10 kg
Gross Weight: 11.34 kg
Volume: 0 m3

Items

Drag the column header here to group by that column

Document	No.	Code	Name	Quantity	Quantity in Basic UOM ▲	Net Weight	Gross Weight	Volume
SO/2021/00001	1	A123GD	A123GD	1 item	1 item	10 kg	11.34 kg	0 m3

1.0000 | 1.0000

Document statistics window

In order to optimize statistical data analysis, a summary row is now also displayed in the statistics window.

In addition, weights/volumes not completed for document line items are now calculated on the basis of item forms.

Changes to synchronization with EDI

Field has been added to a file created when generating sales invoice export to EDI. This field corresponds to the *Due Date* field under *Payment* in document header. The new field is available in section after the field and its value is expressed in days.

Changes to JPK_MAG file

In connection with the changes to regulations of JPK_MAG file structure, the file structure includes also the following documents as of the latest release:

- **IR+; IR+QC; IR+VC** – in the *POR* tab and in the check digits *POR Count/POR Document Value*
- **WM+** whose target warehouse is the same as the that of an audit file – in the *WM* tab and in the check digits *POR Count/WM Document Value*

Quick sales in cooperation with Comarch POS

For the purpose of optimizing sales transactions in stores that do not use barcode readers, the so-called “quick sales buttons” have been implemented in Comarch POS.

Comarch ERP Standard provides new buttons that help configure item groups and items as well as synchronize them to Comarch POS.

A new field *Sales Mode* with the default value *Standard* is now available in the company/center window → tab *POS Workstations*.

The image shows a screenshot of a software configuration window titled 'POS Workstations'. At the top, there are tabs for 'Addresses', 'Documents', 'Operators', 'Tax Returns', and 'POS Workstations'. Under the 'POS Workstations' tab, there is a sub-tab for 'General' and another for 'POS Agent'. The 'General' sub-tab is active, showing various configuration options. These include dropdown menus for 'Data Language' (set to 'English (US)'), 'Method of Searching For Documents' (set to 'Locally'), 'Payment Forms without Deposit', and 'Externally Validated Payment Forms'. Below these are several checkboxes, some of which are checked, such as 'Allow for 0 price in a trade document', 'Allow exchange to items of lower value', 'Allow generation of invoice to overdue receipt', 'Deduct advance payments in full', and 'Sales in different currencies by currency exchange rate'. A dropdown menu for the exchange rate is set to 'FED'. There is also a numeric field for 'Number of Days Before the Date' set to '0'. At the bottom of the window, the 'Sales Mode' field is highlighted with a red rectangular box and is set to 'Standard'.

Sales Mode field in the POS Workstations tab

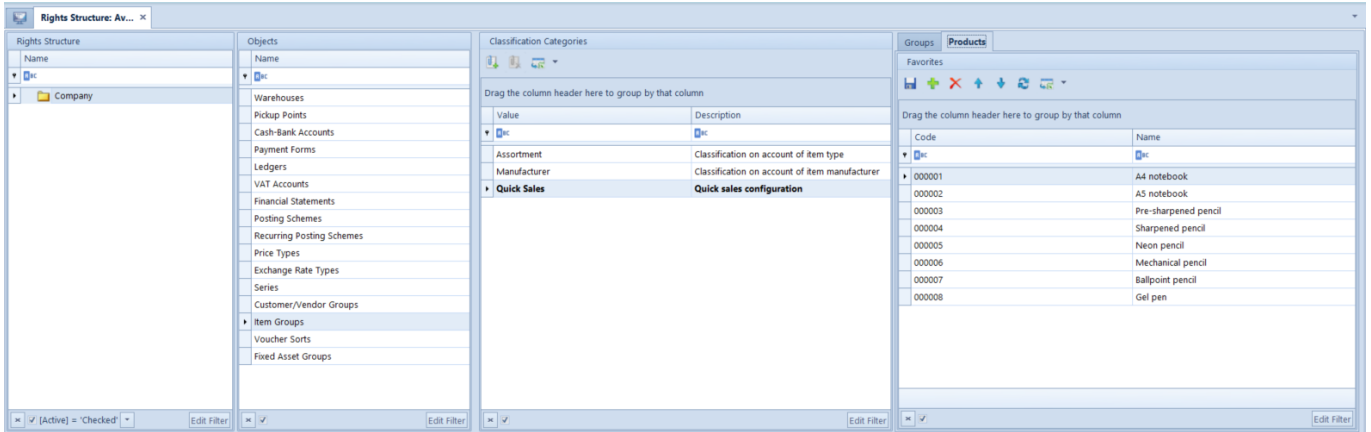

Changing the field value to *Quick Sales* under *Object Availability* (*Configuration* → *Rights Structure*) presents an additional “virtual” item group classification category – *Quick Sales Buttons* is intended for quick sales configuration in POS.

Note

The *Quick Sales Buttons* category is visible only under *Object Availability*.

Selecting this category activates two tabs: *Groups* and *Items* in the window on the right. After selecting the [**Add**] button,

only the line items that have been added to the company/center are presented on the item group/item list.

Moreover, an additional column Quick Sales Group has been added to the group table of other classification categories, which shows the groups assigned to the Quick Sales Buttons classification category.

Synchronization of weight codes with POS

As of the latest release, the definitions of weight codes whose format is compatible with POS technical documentation are now uploaded during synchronization with Comarch POS.

Accounting

Changes to the bad debt relief accounting mechanism (SLIM VAT 2)

Pursuant to the Act on Amendments to the Goods and Services Tax Act as well as the Banking Law Act (SLIM VAT 2), the

following changes have been introduced to the mechanism accounting for bad debt relief:

- The deadline for taking advantage of the bad debt relief has been extended, i.e., documents for which less than 3 years have passed since the invoice documenting the debt was issued, counting from the end of the year in which that invoice was issued, will be taken into account in the ZD notification calculated for the period from 01.10.2021.
- It is now possible to include in a ZD notification the payments to documents:
 - issued for a customer who is not an active taxpayer
 - issued for a customer who is a consumer (natural person not running a business activity)
 - issued for a customer who is undergoing restructuring proceedings, bankruptcy or liquidation

Therefore, during automatic creation of ZD notification, the following question is now displayed: "*Would you like to include taxpayers who are not active VAT-registered taxpayers?*" Selecting the option:

- **No** (default value) – adds into a ZD notification only payments to the documents issued for a customer who is an active VAT-registered taxpayer
- **Yes** (default value) – adds into a ZD notification payments irrespective of whether documents were issued for a customer who is an active VAT-registered taxpayer or not

Regardless of the selected option, payments to the documents issued for a customer undergoing liquidation proceedings (parameter *In liquidation* on customer form) are added to a ZD notification.

Moreover, selecting these buttons: [**Add**], [**Recalculate**], [**Recalculate All**] in a ZD

notification displays the question “*Would you like to include taxpayers who are not active VAT-registered taxpayers?*”
Selecting the option:

- **No** (default value) – displays on the list only payments to the documents issued for a customer who is an active VAT-registered taxpayer
- **Yes** – displays on the list payments irrespective of whether documents were issued for a customer who is an active VAT-registered taxpayer or not

Regardless of the selected option, payments to the documents issued for a customer undergoing liquidation proceedings are always displayed on the list.

Auto Update

Process and service management

In the component configuration window of Comarch ERP Standard, there is a new section named *Close Processes Automatically During Updates* used to manage the behavior of Comarch ERP Standard-related processes and services during installation of fixes and add-ons.

Close Processes Automatically During Updates:

Close	Start Services	Process Name	According to Add-On Settings
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Altum	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Altum32	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	RetailServices	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	DS	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	DbManager	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	NewAltumConfigurator	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Comarch.Search.Server	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Workflow	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Workflow32	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	BPM	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	BPM32	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	WorkflowConfigurator	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	BPMConfigurator	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input type="checkbox"/>	ProblemSolver	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Comarch.B2.Inbox.ServiceHost	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Comarch.Workflow.WorkflowServer	<input checked="" type="checkbox"/>

Note! The parameter 'According to Add-On Settings' applies only to process configuration for actions related to add-ons. If it is deselected, the configuration of process closing will be based on the 'Close' and 'Start Processes' parameters.

Process and service management section under Comarch ERP Standard component configuration

In this section, it is possible to:

- close a process (application) – column *Close*
- stop a service and optionally start it upon installation – column *Start Services*
- use the configuration defined in the add-on – column *According to Add-On Settings*

Remote installation statuses

The new release of Comarch ERP Auto Update provides an improved mechanism for informing the user about synchronization status of child agents and about remote installation statuses of fixes and add-ons, which are installed on child agents from the level of the parent agent.

Supported use cases are the following:

- After the remote (QF/Add-on) installation window is closed, the information about the queued installation for an offline agent is still displayed

- After the remote (QF/Add-on) installation window is closed, the information about failed installation on a child agent is still displayed
- After selecting the [**Enforce Synchronization**] button, the status of such synchronization is still presented in section *Agent Network Management*

Automatic verification of new Auto Update version

Whenever a new version of Comarch ERP Auto Update application is available, a relevant information is displayed on the bottom bar of the program window.

Information about a new Comarch ERP Auto Update version

Upon its confirmation, the question below will be displayed:

Question whether to upgrade Comarch ERP Auto Update version

Other changes

To reduce possible fix-related issues, running of Comarch ERP Standard and Comarch POS applications is now blocked. It is not possible to run these applications until the fixes are first installed.
